## CamTracer

High-Resolution Digital Camera

The CamTracer provides ease of use for fast, accurate, color image capture within imaging applications.

# CamTracer

## PRODUCT OVERVIEW

The **CamTracer** digital camera is the perfect complement for your professional ID card system. Specifically designed for photo ID, this high-resolution camera provides ease of use for fast, accurate, color image capture within high-imaging applications.

The **CamTracer** has many powerful features that enhance the quality of pictures used in ID cards. With its built-in synchronized flash, the **CamTracer** is very simple to use: simply plug in the USB cable into your computer and install the driver. Another main benefit is the great picture quality provided by the 16mm lens, with a 1280 x 1024 square pixel array.

1.2-megapixel power provides sharp edges and bright, accurate colors. Fully programmable with a free SDK, the **CamTracer** includes various customizable default settings such as definable skin tone, auto white balance, auto exposure and many more useful and flexible features that allow customers to suit their own needs. The **CamTracer** comes also with free software called **CamTracer Capture** that allows customers to take the camera and use it right out of the box.
